

General description

Our International Shore connection is in accordance with the regulation of "International Convent for the safety of Life at Sea, 1960" (SOLAS). It is used for connecting your onboard fire fighting installation mains to the harbour.

The dimensions of the flange are standardized globally.

This International Shore connection comes without coupling.

Features

- Connection to harbour fire lines
- Standardised connection
- Can be connected to any coupling

Benefits

- This connection allows you to connect onboard fire main lines with the harbour fire systems in emergency and in dry dock
- Standard flange size connection globally makes it easy and quick to connect in any port
- Gives you the choice to connect any coupling compatible to your onboard fire main connection

Inlet connection thread	2inch male
Inside dia. d (mm)	45
Face-to-face length L (mm)	90
Flange-dia. D (mm)	178
LK/z	132/4
Hole dia. (mm)	19
