SOS505 Fire fighting foam and hose Chest

Shown with optional dibond sign on lid

Typical use:

Foam equipment for commercial shipping fire fighting. Designed to store 2 x foam containers, 1 x fire hose and a branch pipe.

Description:

These chests are manufactured using UV stabilised polyethylene in a 4-5mm single skin. This makes them far more durable than alternatives made with thin double skins. The unique lid design with the marine bungy cord closure achieve an excellent IP rating of X5 so the contents will remain dry. The hinges are 316 Stainless steel and have proved to be 100% reliable. The cabinet base is reinforced for mounting to the deck.

The chests can be stacked up to 10 high to minimise freight and storage costs. Jo Bird keep on hand stock to achieve a very short lead time of no more than a few days from receipt of order.

Standard specification:

Dimensions :Height x width x depth:

475 x 995 x 615 mm (18.7 x 39.2 x 24.2")

Aperture: 890 x 487 mm (35 x 19")
